Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for stabilizing a <u>soluble</u> recombinant protein solution formulation, which comprises storing the protein solution formulation under a magnetostatic field, wherein the magnetic flux density of the magnetostatic field is 1 mT (millitesla) or more.

Claim 2. (Cancelled)

- 3. (Currently Amended) The method according to claim 1, wherein the <u>soluble</u> recombinant protein is a physiologically active protein.
- 4. (Original) The method according to claim 3, wherein the physiologically active protein is selected from an antibody, an enzyme, a cytokine and a hormone.
- 5. (Original) The method according to claim 4, wherein the physiologically active protein is a hematopoietic factor.

6. (Original) The method according to claim 5, wherein the hematopoietic factor is erythropoietin or granulocyte colony-stimulating factor.

Claim 7. (Cancelled)

8. (Currently Amended) The method according to claim 1, wherein the <u>soluble</u> recombinant protein solution formulation is in the form of a pre-filled syringe formulation.

Claims 9-10. (Cancelled)

- 11. (Currently Amended) A method for stabilizing a <u>soluble</u> recombinant protein-containing solution, which comprises storing the protein-containing solution under a magnetostatic field.
- 12. (Currently Amended) The method according to claim 11, wherein the <u>soluble</u> recombinant protein-containing solution is a bulk solution for protein production.

Claims 13-18. (Cancelled)

19. (Currently Amended) The method of claim 1, wherein the <u>soluble</u> recombinant protein is an isolated and purified recombinant protein.

- 20. (Currently Amended) A method for stabilizing a composition consisting essentially of a <u>soluble</u> protein and a pharmaceutically acceptable carrier comprising storing the composition under a magnetostatic field.
- 21. (Currently Amended) The method according to claim 20 wherein the <u>soluble</u> protein is selected from the group consisting of antibodies, enzymes, cytokines, and hormones.
- 22. (Currently Amended) The method according to claim 20 wherein the soluble protein is a hematopoietic factor.
- 23. (Previously Presented) The method according to claim 22 wherein the hematopoietic factor is erythropoietin or granulocyte colony-stimulating factor.
- 24. (Previously Presented) The method according to claims 20 wherein the pharmaceutically acceptable carrier is water.
- 25. (Previously Presented) The method according to claim1, wherein the magnetostatic field is generated by a magnet.
- 26. (Previously Presented) The method according to claim11, wherein the magnetostatic field is generated by a magnet.

- 4 -

27. (Previously Presented) The method according to claim20, wherein the magnetostatic field is generated by a magnet.

- 5 -
